

Ultra High Speed Pads

The Wet-Look Shine

Everyone wants to know more about the wet-look shine and how to obtain it. As a supplier of floor maintenance pads for the sanitary maintenance and supply market, we have been actively supporting research being conducted by machine and finish manufacturers, distributors and end users in an effort to determine exactly what type of pads are needed. Results of this research indicate a need for more than one type of floor pad because floor surfaces and preparation procedures are not all the same - they vary with the type of finish used, machine pad weight and environmental conditions. It has been determined, therefore, that a series of specially manufactured pads with varying degrees of aggressiveness should be made available to end users. A selection from the six pads above will produce and maintain the wet-look shine on various floor surfaces when used with the different types of finishes and machines.

- Centre hole punch-out plug or with optional ▼ bolt hole for high speed machines

- A Beige - Burnishing**
A moderately soft burnishing pad for a softer finish
- B Jackeroo Lite™ - Burnishing**
A natural hair pad that excels in bringing out the luster on softer, buffable floor finishes
- C Champagne - Burnishing**
A soft-textured pad for dry burnishing and buffing for a high gloss
- D Buckaroo™ - Burnishing**
A natural hair burnishing pad that is hard and aggressive
- E Jackeroo™ - Burnishing**
A blend of natural hair and synthetic fibres with the lubricating effect of a hair pad
- F Blue Ice - Burnishing**
Restores damaged finish to a deep gloss shine
